Disposal

Used PPE can become contaminated with hazardous or environmentally harmful substances. PPE contaminated with chemical or biological agents must be disposed of properly, paying particular attention to the disposal requirements for such substances, as well as local or national regulations. It is the end user's responsibility to ensure that the garments are disposed of properly.

Conservation time

21 MAY

To ensure a 5-year shelf life for PPE from the date of manufacture, the instructions in the Storage section must be strictly followed. The manufacturing date can be found on the product label. Actual shelf life cannot be accurately determined and will depend on the intended use of the product.

Storage

Unopened boxes should be stored, if possible, in their original packaging, in a cool, dry place away from direct sunlight or strong light sources. Before use, all PPE, regardless of age, should be visually inspected for damage or breakage and to ensure it is in perfect condition. Damaged or worn PPE should not be used in hazardous situations.
